

Fixer Currency Converter API Configuration

<u>Guide</u>

Fixer is an advanced currency and exchange rate API platform that delivers latest exchange rate data for all or a specific set of currencies. Its other features include converting amounts from one currency to another, retrieving time-series data for one or multiple currencies and querying the API for daily fluctuation data.

To configure the Fixer Currency Converter API plugin, go to Manage Settings > Currency Management > Configuration.

2. Click on Sign Up Free and you are redirected to the Fixer API Plans page.

Select a plan as per your requirement and follow the instructions to complete the sign in process.

Asterisk (*) next to a form control's label indicates it as 'required'.

- **3.** Once you are logged in, the **Dashboard** page is opened.
- **4.** Locate the **access key** displayed under the **Your API Access Key** section.

A fixer			Pricing	Documentation	FAQ	Affiliates	Blog	Status	Dashboard	
	Control Panel - Dashboard					Logged In as	ł	(Sign Out)		
	Dashboard		cations							
	Upgrade									
	Subscription Plan	3-Step Quickstart	Guide			Documentati	on			
	Account	📌 Your API Access Key								
	Payment									
	API Usage							Reset		
	Other APIs									
	Sign Out									

5. Lastly, copy the access key using the keyboard shortcut (Ctrl+C). Another way through which keys can be copied is through right mouse click and selecting the copy option. Once it's done, paste the keys into the Manage Settings > Currency Management > Configuration form.

If the free key is configured, set **EUR (Euro)** as the **Default Base Currency** for the plugin to work. There is no such restriction when configuring the paid API key.
